

# MedAssist: AI-Powered Rural Healthcare Bridge

Presented by: Team Infinite Recursion-  
Agniv Dutta, Aditya Choudhuri, Ankit Datta  
Made for GDG Lakecity Hackathon

# Key Challenges in Rural Healthcare

---

## Access

Rural healthcare access is severely limited, leaving many communities without essential medical services and support.

---

## Scarcity

There is a significant shortage of doctors in remote regions, making timely care difficult for residents.

---

## Delays

Patients experience delays in diagnosis and emergency response times, resulting in worsening health outcomes.

---

## Costs

High consultation costs burden rural populations, making healthcare unaffordable and inaccessible for many families.

# Key Features of MedAssist

---

## Symptom Checker

An **AI-powered tool** that assesses symptoms and provides accurate health insights for users.

---

## Emergency Detection

Real-time identification of emergencies linked to **ambulance services**, ensuring timely medical response.

---

## Medical History

Comprehensive management of patient medical records for better **continuity of care** and treatment efficacy.

---

## Health Education

A vast library of resources covering essential **health topics** to educate and empower users.

# Architecture Diagram

This section outlines the technical architecture of MedAssist, detailing the robust tech stack that supports our platform. With React for the frontend and Flask for the backend, combined with the Gemini API, our architecture ensures seamless performance and scalability in rural healthcare delivery.

# Data Flow Diagram

# Key Features and Enhancements of MedAssist

01

## Symptom

AI-driven symptom assessment for accurate diagnosis

02

## Summary

Comprehensive patient history tracking for informed care

03

## Alerts

Real-time alerts for critical health situations

04

## Education

Extensive library providing health education resources

# Benefits & Impact

- Reduces diagnosis delays
- Improves rural healthcare access
- Lowers consultation costs
- Supports doctors with AI insights
- Works with low infrastructure

# Future Scope & Scalability

- Regional language support
- Integration with government health schemes
- Wearable health device integration
- Offline-first support for low connectivity areas
- Expansion to maternal & child healthcare
